## Yaletrac Cable Pullers

Yaletrac® cable pullers feature a lightweight, compact, high strength aluminium housing, smooth contour design with a large, flat bottom surface for increased stability in horizontal and vertical working positions.

Forward and reversing levers in tandem provide slim design and assure power transfer along the centre line. Overload protection is by a shearing pin in the forward lever. Spare shear pins are conveniently located in the carrying handle or operating lever. A broken pin can be replaced without removing the load.

A lever disengages the rope clamp system allowing easy, smooth installation of the wire rope.

Yaletrac® uses a special flexible wire rope. It has six strands with a steel core and is identified by an orange strand. The rope is tapered at one end for easy threading and fitted with a safety hook on the other end.
